

Cross-scenario summary

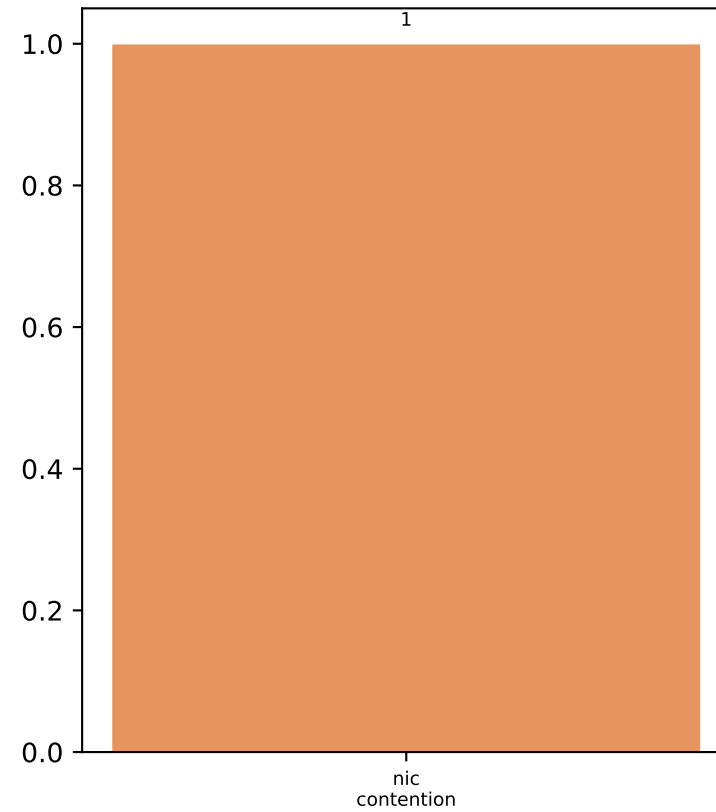

Leader Elections

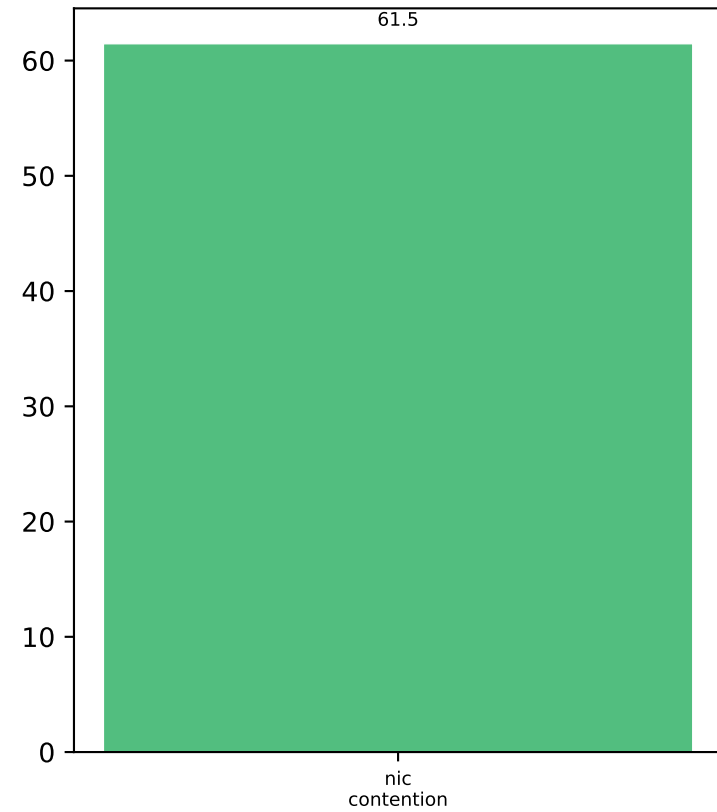

Total HB Failures

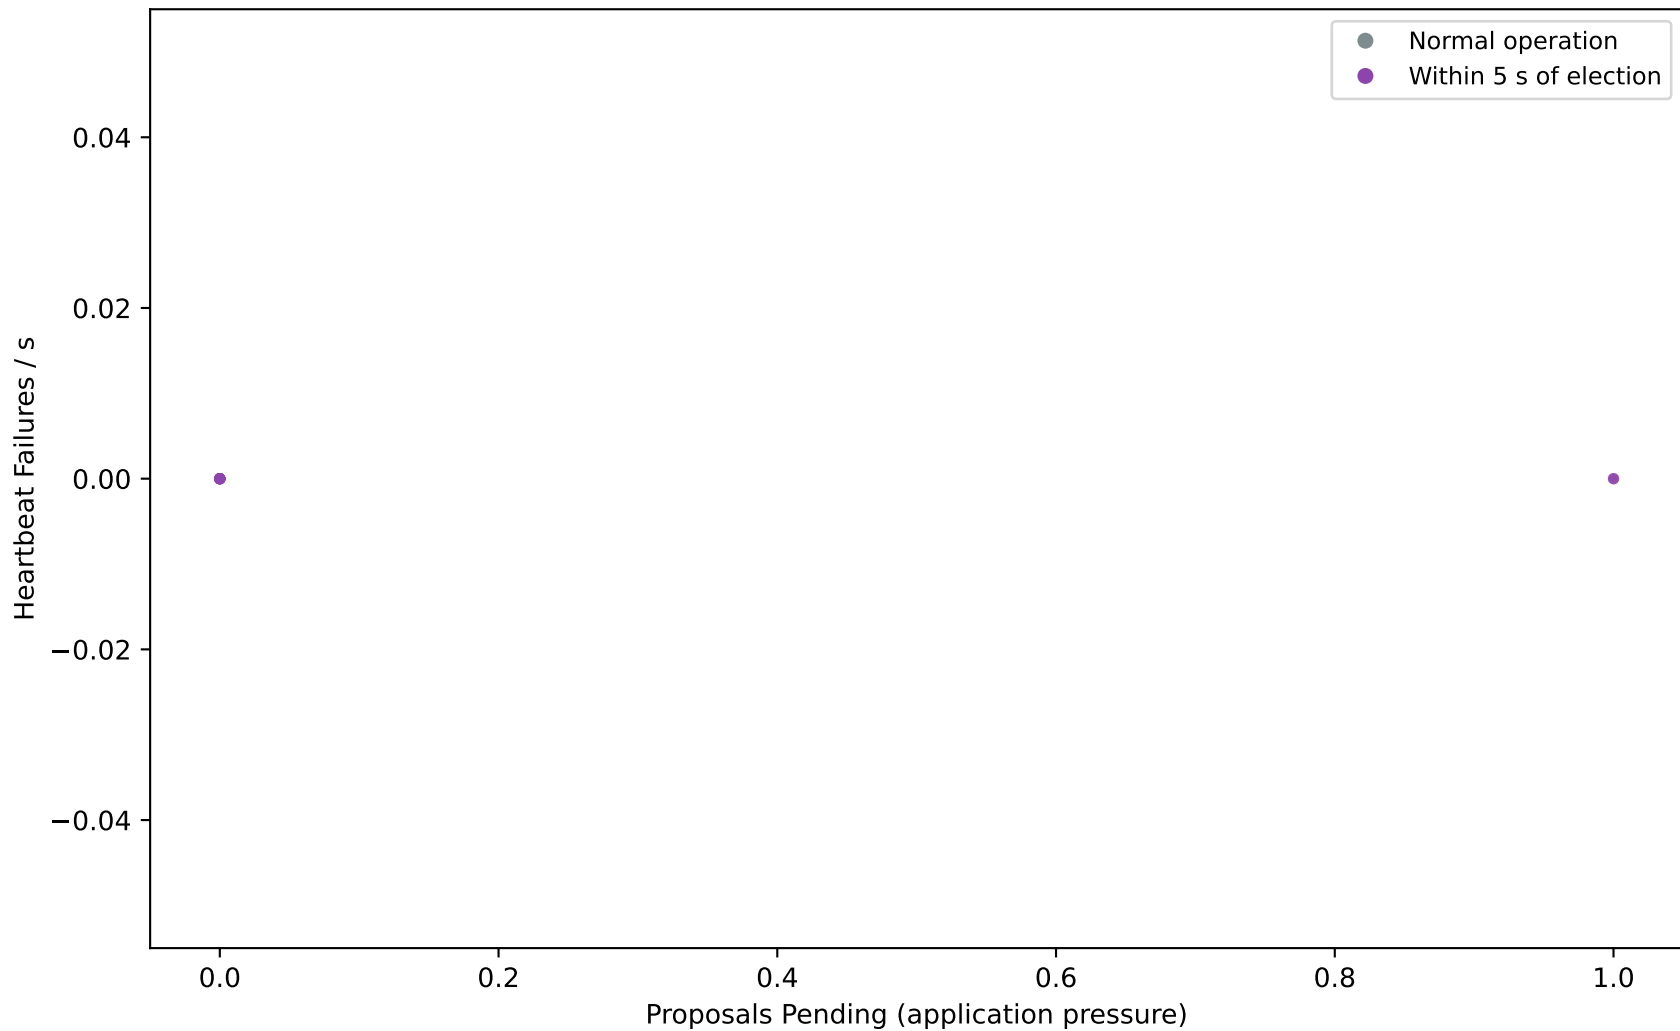

Max Proposals Pending

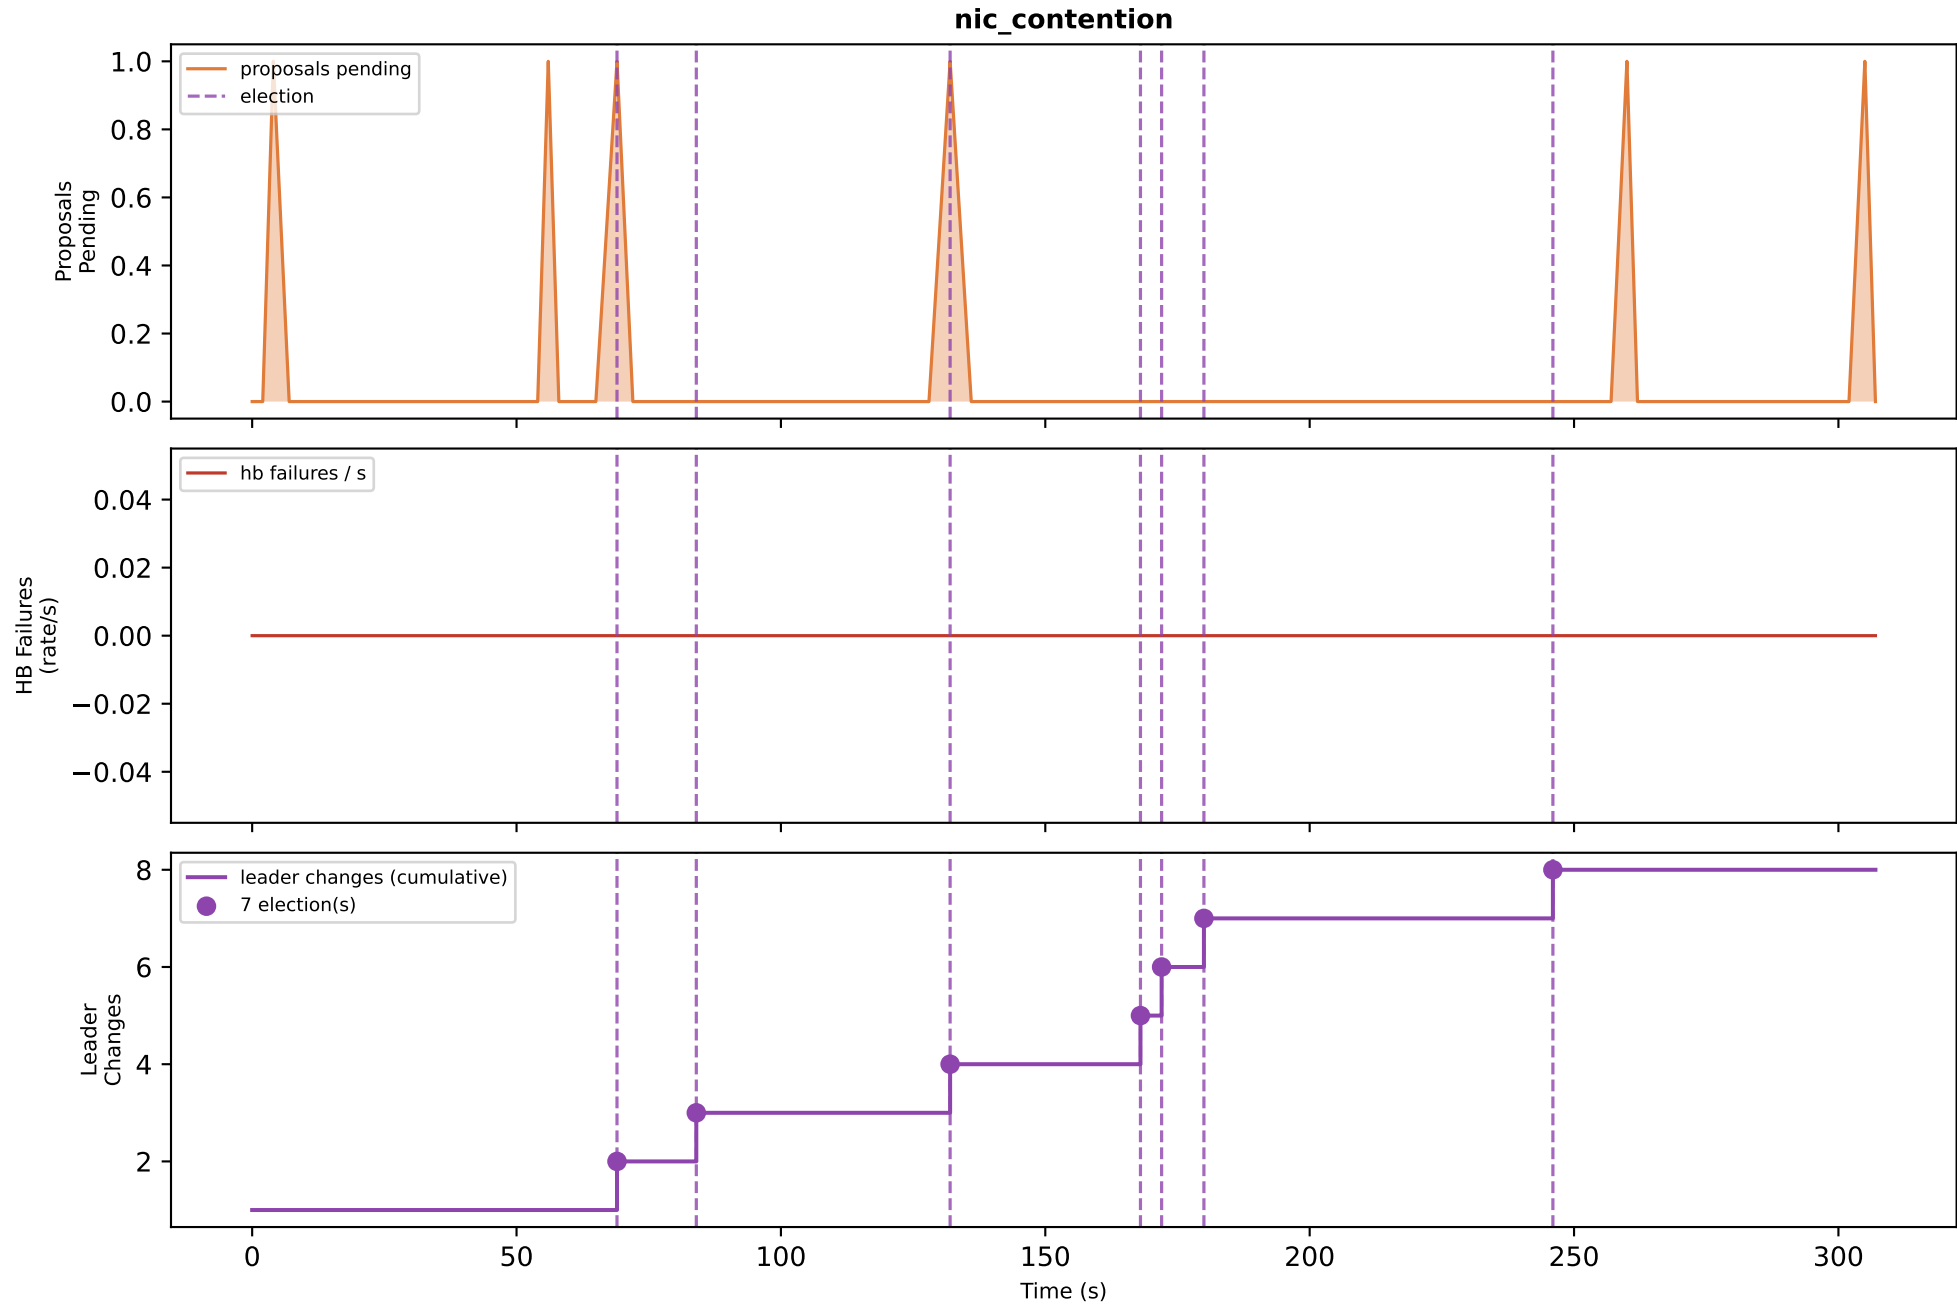

Success Rate (%)

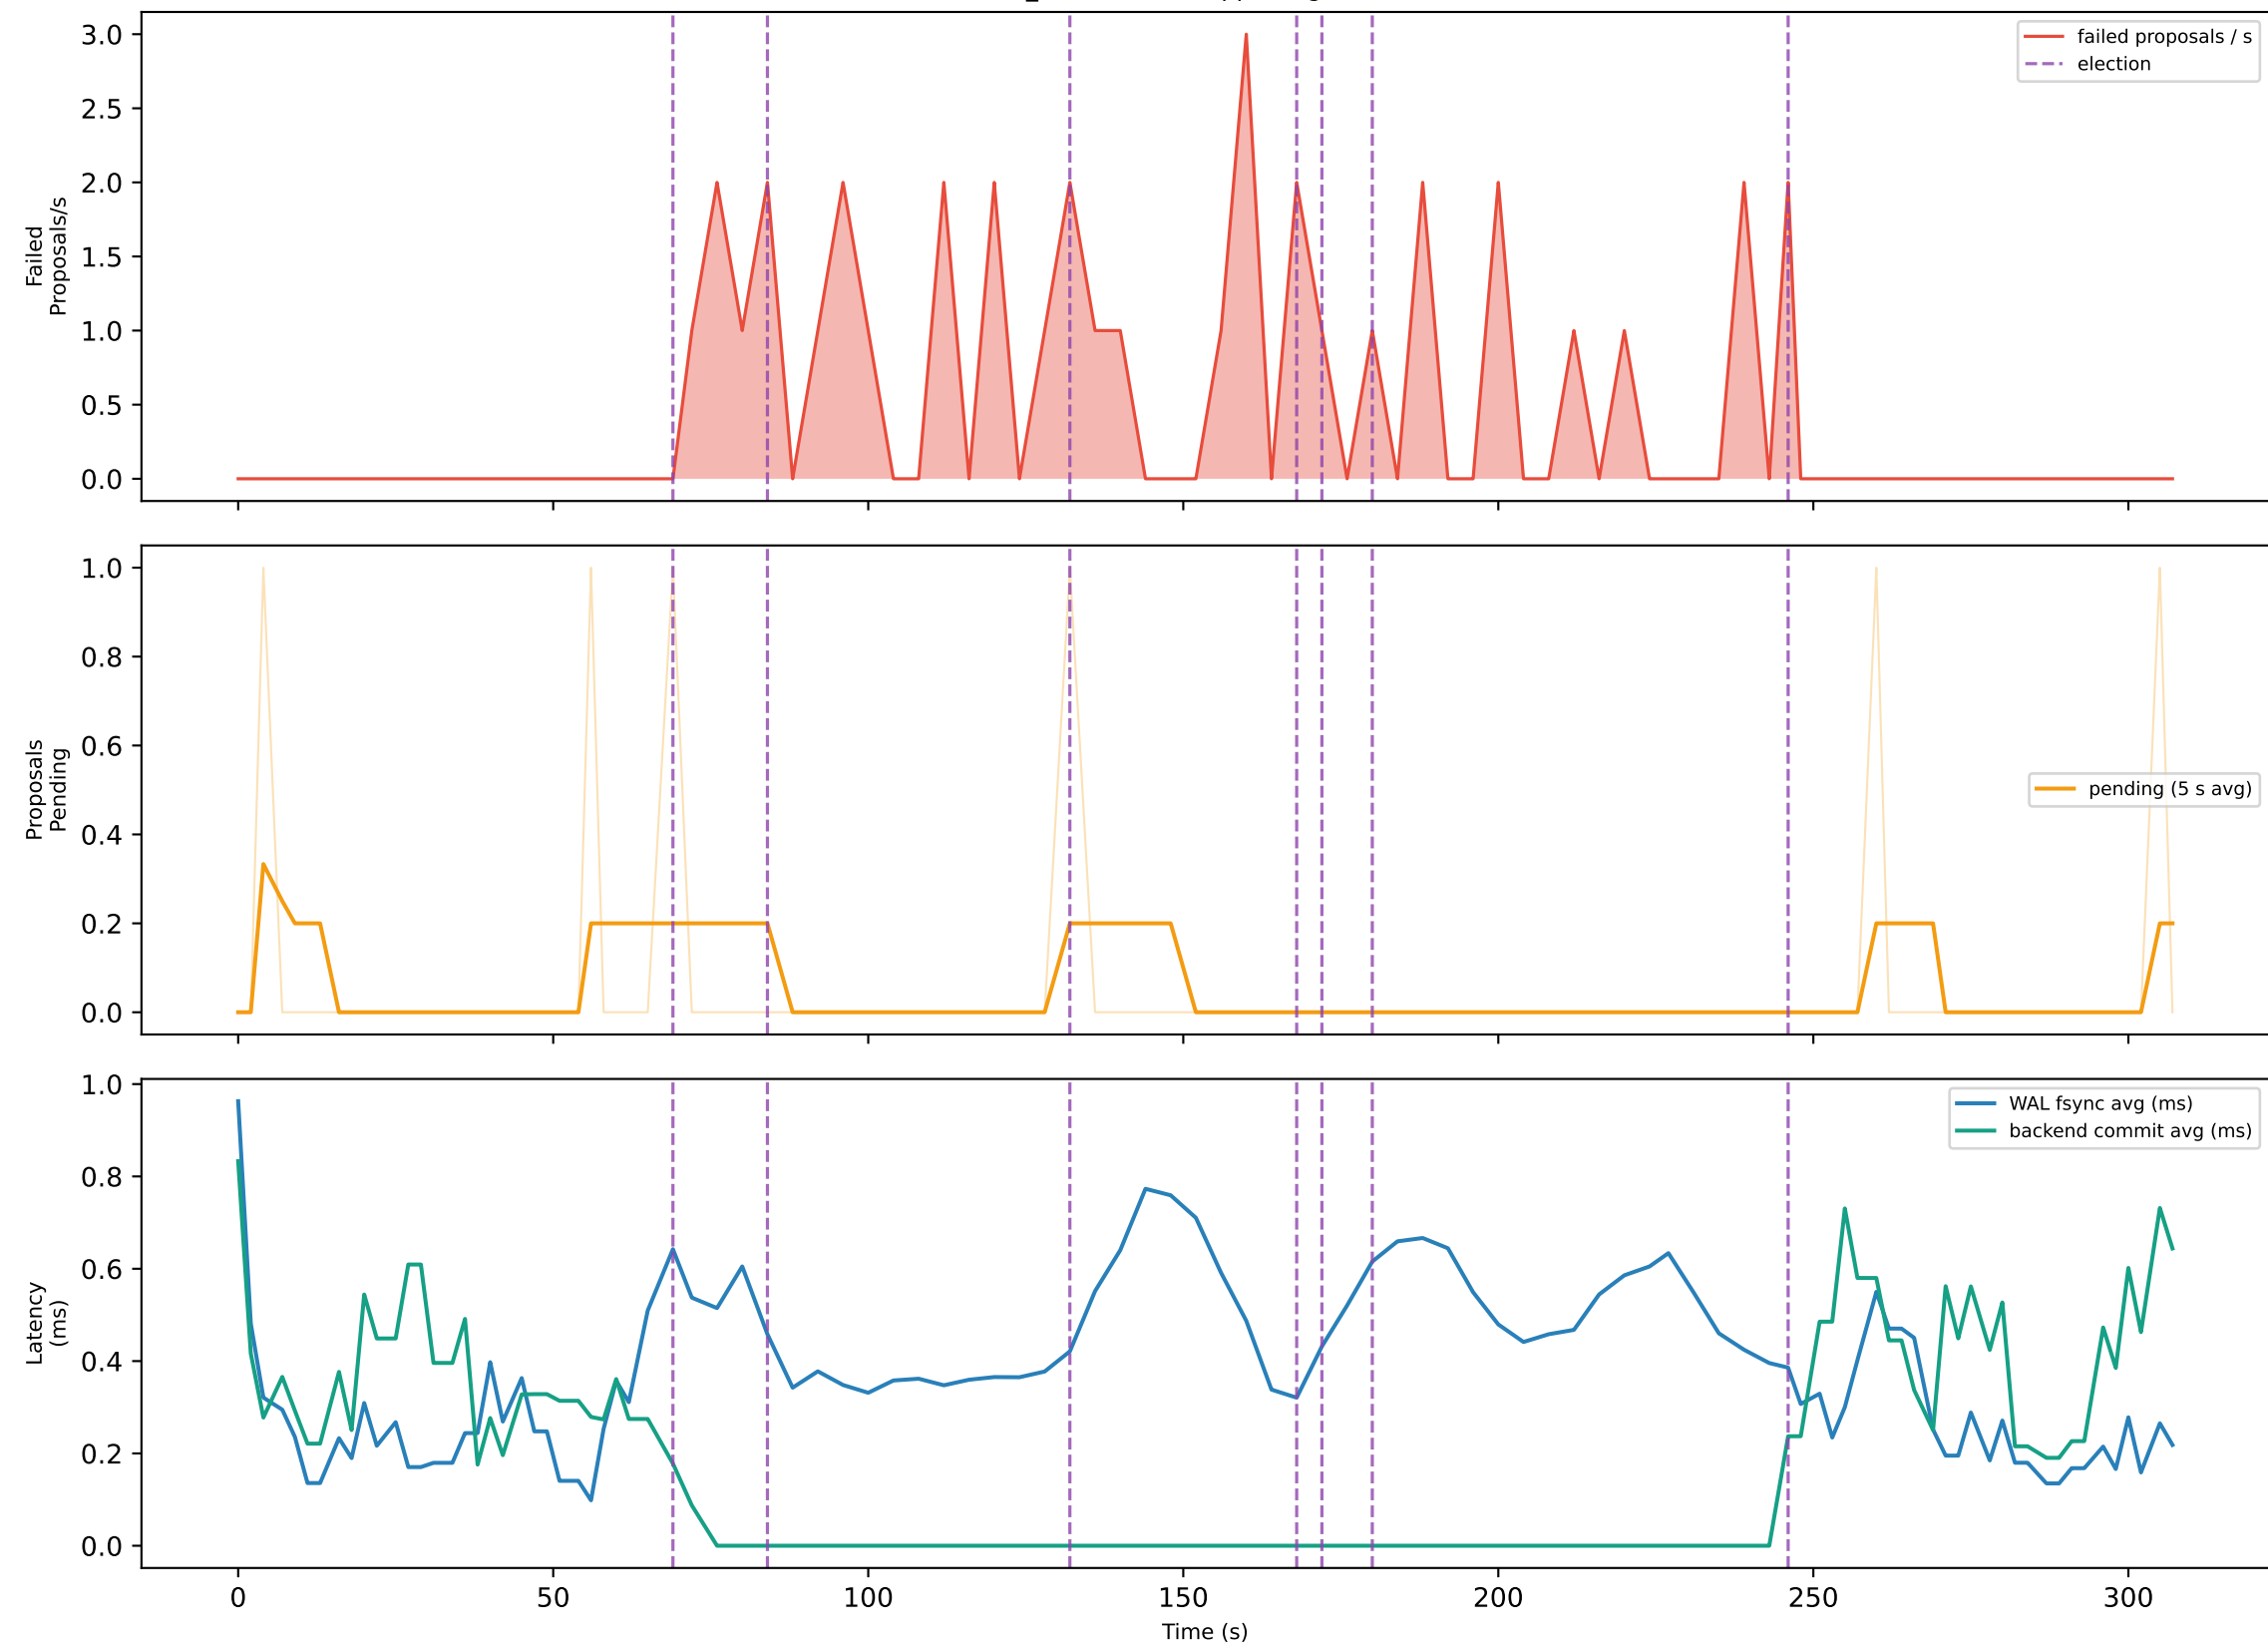

Application pressure vs heartbeat failures
(purple = seconds leading up to a leader election)

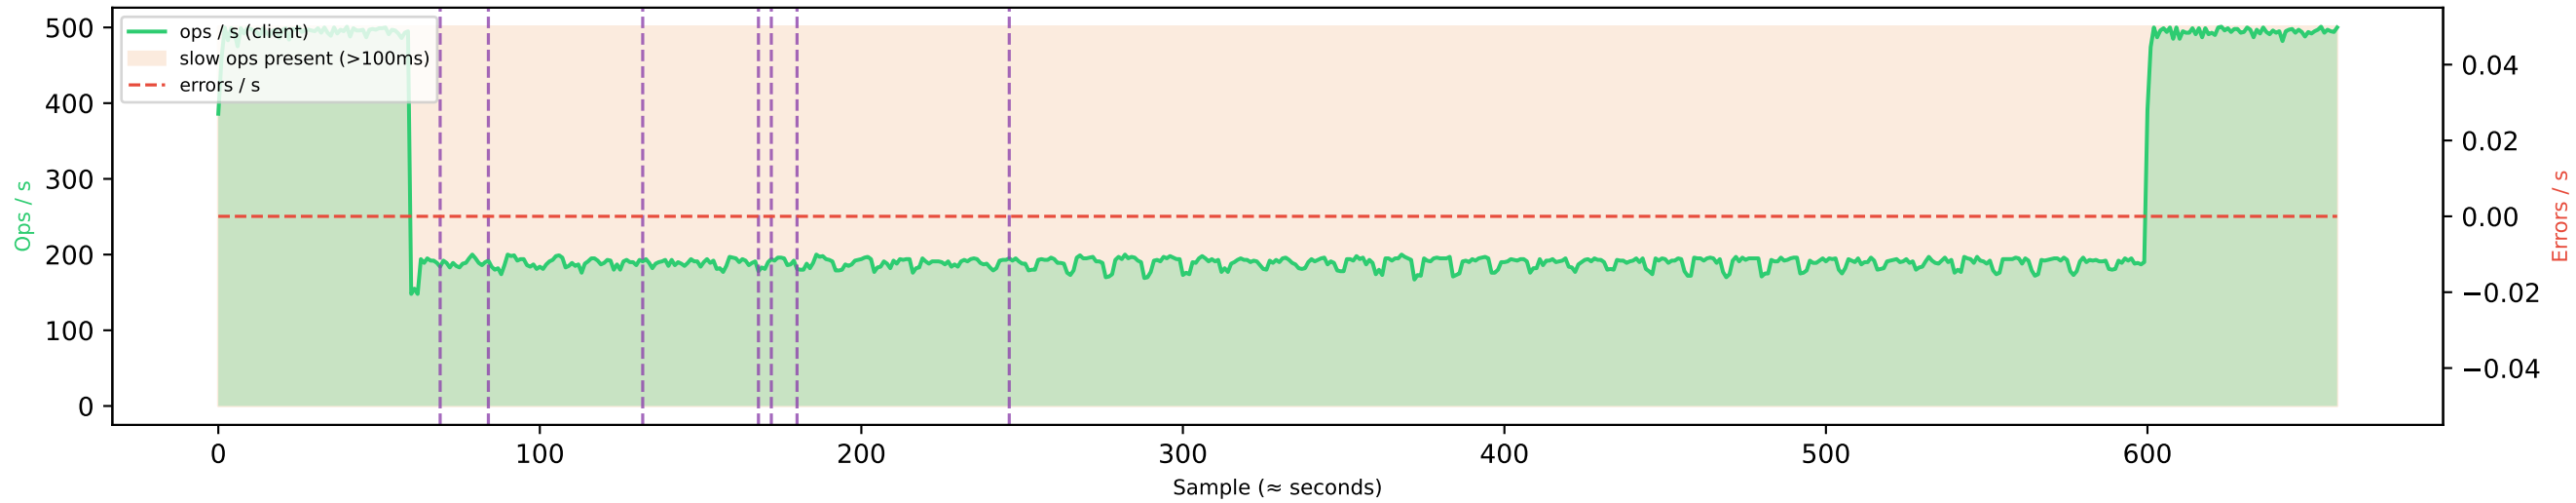

nic_contention - supporting metrics

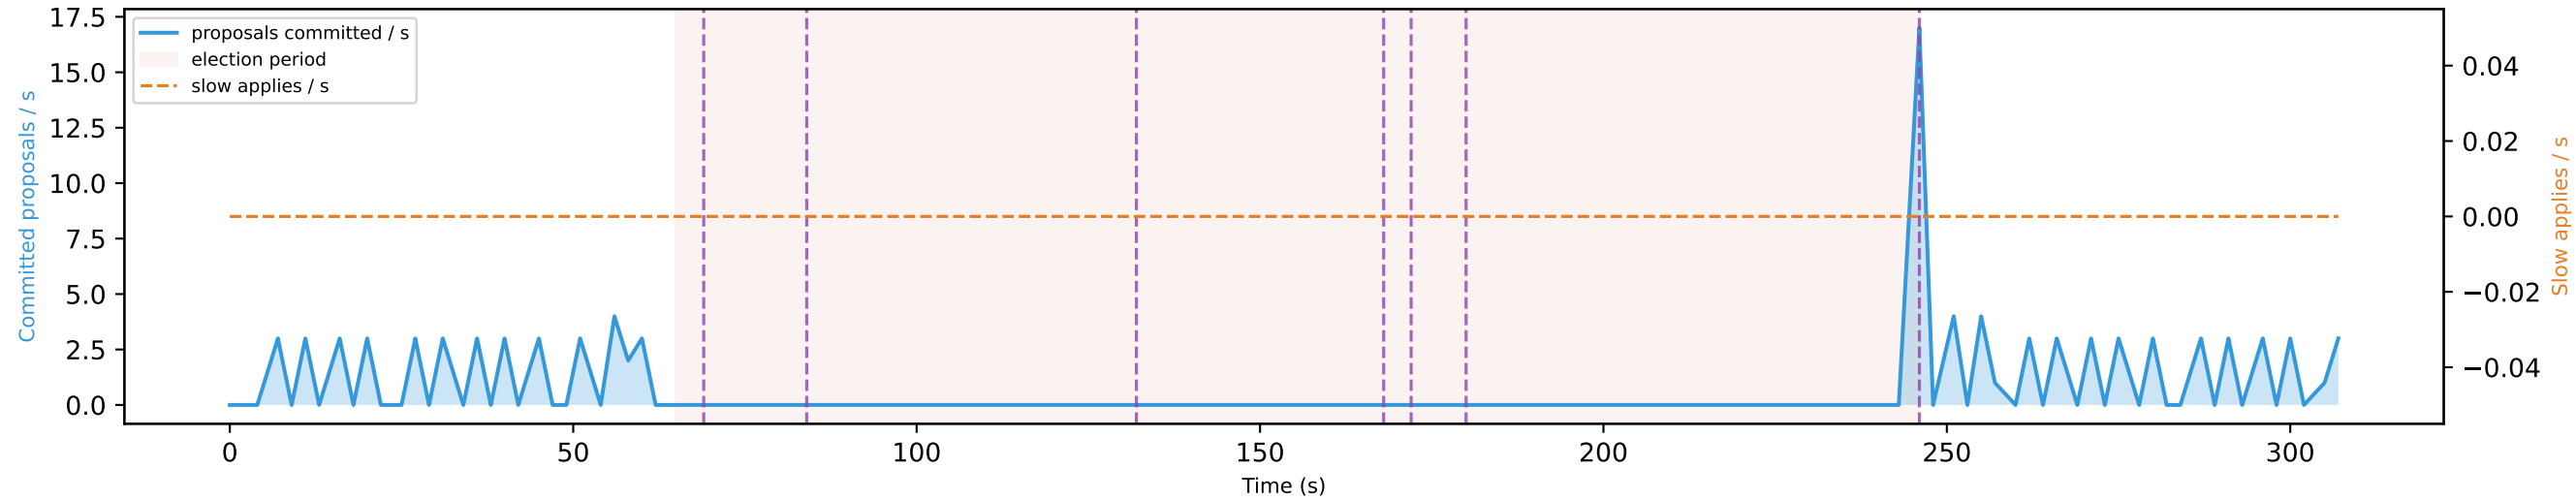

nic contention — throughput & raft performance penalty
(7 election(s) detected — red shading = leaderless period)

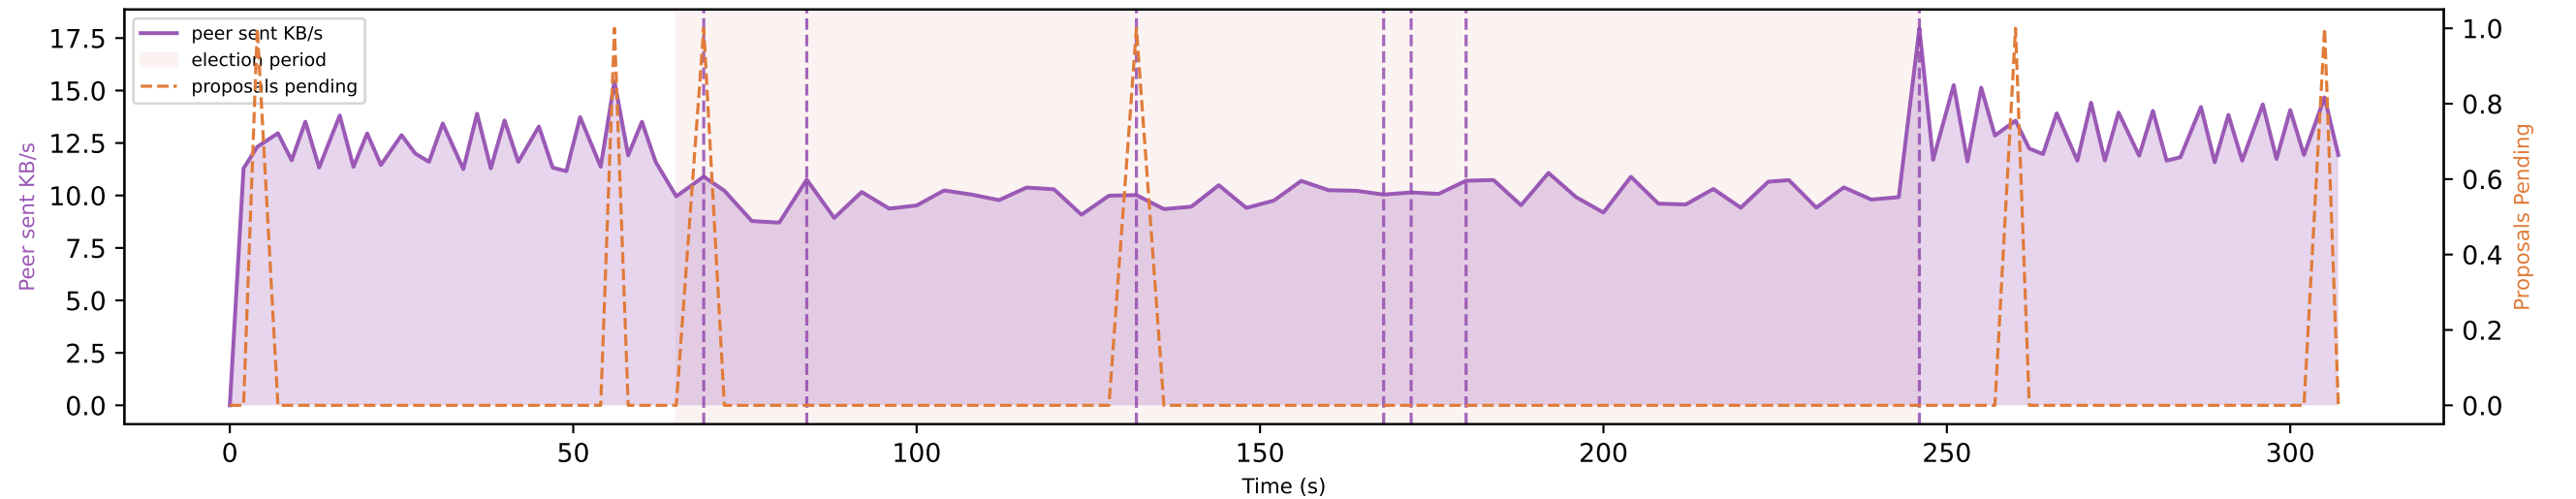

Client-side throughput — drops to zero during elections

Server-side commit rate — confirms writes stall, not just client throttling

Network utilisation — saturated pipeline blocks heartbeats

nic_contention — latency vs leader elections (7 election(s))
